

## FLAME CUTTING - Precision in Steel Processing

### Welcome to WOLF + HEKEL

We would like to offer you some insights into the steel processing with a brief overview of our company. Our philosophy is based on three essential success metrics in the market: strong performance, flexibility and quality. These three are value-determining factors for everything we do and for how we do it. Our employees are a key part of our philosophy. We serve our clients locally through well-trained sales employees. They work individually and as part of a team. Our staff is specialized, competent and committed. In our extended plant, we now also stock larger quantities of well-assorted materials which are available to you at any time. Through purchasing directly at well known plants, we ensure the quality of our products and are able to react sensitively to market changes. Therefore, we are able to purchase all grades directly from the manufacturer at any time. Just in time deliveries and framework agreements with stockpiling are services our customers appreciate. For this purpose, we have six flame-cutting machines in four halls at your disposal throughout the year which work in two-shift operation.

### Our central theme is quality.

- Our operations are technically and commercially supported by state-of-the-art IT technology. Your sketches, data, and drawings are entered into our system. Afterwards, everything is processed with CAD. This offers you and us a decisive time and information advantage.
- Since 1995, we use a certified quality system according to DIN EN ISO 9001 to comply with your individual standards and quality requirements. From purchase to delivery, the goal is to provide 100 % quality in products and services, regarding the authorization to restamp, and in the commissioning of flame-cut parts.
- In terms of production, we exceed standard measures. Processing piece weights of up to 50 tons and autogenously flame-cut parts up to a thickness of 800 mm with maximum width and length, is everyday business for us. Our specialty is flame cutting on various levels!
- Multiple inspections

accompany every order: Internal (e.g. the ultrasonic test or the nondestructive crack detection) and external (e.g. the quality control of our materials by independent laboratories).

### **Good in all grades**

For our customers we will go through thick and thin. From sheet metal up to finished parts, we deliver everything from a single source - reliably and individually!

### **Any further questions ?**

Give us a call. We can procure any material that is not on stock

through well-known companies. We understand the art of refining the steel business with flexibility. Based upon a highly efficient, flexible and quality-oriented production, we manufacture workpieces of all grades, that are cut and processed according to your individual needs. **Let us prove it to you!**
